ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: METHOD AND APPARATUS FOR PRODUCING POLYMERS

(57) Abstract: Method and apparatus of producing polymers in a
gas phase polymerization reactor, which has an elongated reactor
body, and an essentially vertically disposed central axis. The reac-
tor comprises an upper part and a lower part, which are separated by
a distribution plate, which promotes distribution into the fluidized
bed of monomers flowing from the lower part into the upper part.
According to the invention, at least a part of the gas stream fed into
the lower part of the reactor is conducted along the inside of the
reactor walls past the distribution plate to prevent the formation of
stagnant zones in the fluidized bed at the reactor walls in the vicinity
of the distribution plate.
